SUMMARY

Software Engineer with a proven foundation in building scalable applications and automated systems. Experienced in architecting serverless cloud databases, developing cross-platform mobile interfaces, and integrating real-time IoT hardware to deliver end-to-end technical solutions.

EDUCATION

University of Cebu - Banilad, Cebu City, Philippines | **2022 - 2026**

Bachelor of Science in Information Technology

EXPERIENCE

Ollopa Corporation | **2026**

Back End Developer Intern

- Architected secure RESTful APIs and optimized relational database schemas using Java and Spring Boot, improving overall backend data retrieval performance.
- Collaborated within an Agile technical team environment, utilizing Git for version control and rigorous testing workflows to ensure the delivery of high-quality, scalable backend solutions.

Innodata Knowledge Services, Inc. | **2020**

Part-Time Data Labeler

- Processed, annotated, and structured datasets to ensure high data quality.
 - Supported the training and accuracy of technical systems and machine learning models.
-

TECHNICAL PROJECTS

AguaCommunitas

- Developed and successfully defended a full-stack, automated rural community water management system, engineering the cross-platform mobile dashboard utilizing Flutter.
- Architected a serverless cloud backend using Firebase, integrating Realtime Database to handle live IoT sensor streams and Firestore for scalable, structured document storage.
- Integrated live hardware metrics from micro-controllers (ESP32) to track real-time water levels and quality, automating a single-pass physical filtration loop for efficient resource management.
- **Tools Used:** PlatformIO, Flutter, IoT Sensors, VS Code, Firebase.

HeatAlert

- Engineered a smart IoT fire and safety system designed to protect homes in real time.
- Combined an ESP32 micro-controller with DHT22, MQ-2, and infrared sensors to instantly detect smoke, flames, and abnormal heat.
- **Tools Used:** Kotlin, Android Studio, VS Code, PlatformIO.

BattleArt

- Created a community-driven platform allowing artists to share original work and participate in reinterpretation-based "art battles."
- Fostered creative growth through competitive challenges and implemented a system for constructive peer feedback.
- **Tools Used:** PHP, MySQL, Laravel, Bootstrap, VS Code.

P.I.M.S. (Personal Inventory Management Suite)

- Developed a multi-tenant inventory management system to efficiently log, organize, and track assets across various locations.
 - Integrated dynamic barcode generation and hardware-accelerated scanning to streamline asset identification and minimize manual entry errors.
 - Implemented core CRUD operations with role-based access control and transaction logging for seamless data handling.
 - **Tools Used:** Next.js, TypeScript, Tailwind CSS, Supabase (PostgreSQL), Drizzle ORM.
-

SKILLS

Languages: Java, C, C#, Kotlin, PHP, HTML, CSS, TypeScript, Dart

Frameworks & Libraries: Spring Boot, Next.js, Laravel, Flutter, ASP.NET MVC, Tailwind CSS, Bootstrap

AI & Data: AI-Assisted Development, Prompt Engineering, Machine Learning Data Annotation, Dataset Structuring

Databases & Tools: MySQL, PostgreSQL, Drizzle ORM, PlatformIO, VS Code, Android Studio, Firebase
